- Secretary
- Treasurer

### Top IT Infrastructure Security Threats

Every company knows it must maintain sound security to be a force in the marketplace. If that is true, why do we continue to identify security vulnerabilities within the company? The unfortunate thing is there is more attention given to external threats and issues than those that are more likely to occur and have a greater impact to the company.

We will explore common internal security issues, discuss why they occur, and what can be done to prevent them from occurring, or at least minimize the significance should they occur.

The session is intended to be interactive so please be ready to discuss your thoughts and experiences related to IT audit security exceptions, and how you addressed them in your own company.

**Speaker:** Dan Hirstein, Deloitte

Dan is a Client Service Director in the Advisory Services practice of Deloitte & Touche, LLP. He has over 29 years of information systems experience both as a practitioner and in a consulting role. During his twelve years at Deloitte he has specialized in the areas of Control Assurance and Internal Audit focusing on information technology controls. Dan's experience offers a broad perspective system implementations, security baselines and transactional processes across several industries, client sizes and cultures. Dan is a Certified Information Systems Auditor (CISA) as well as a Certified Internal Auditor (CIA).
