Please denote any dietary restrictions when registering and accommodations will be made.

Presenter: Tom Walsh, CISSP – President, Tom Walsh Consulting, LLC.

Speaker Summary:

Tom Walsh is a nationally recognized speaker who launched his own consulting practice in 2003. Tom and his associates conduct risk analyses, compliance evaluation, disaster recovery planning, security training, and remediation activities for clients. Tom is also the co-author of four books on healthcare information security.

Presentation Overview:

- Session Overview
 - The process of assessing, analyzing, and managing security risk can be tricky. Often, technical and security staff get entangled with the “paralysis of analysis” which hinders progress. Risk management is about understanding, not eliminating all risks. This presentation provides a systematic approach for effectively conducting a risk analysis and managing the residual risks to an acceptable level.
- Session Objectives:
 - Identify the difference between risk analysis and risk assessment
 - Define the basic steps used in completing a risk analysis: how to identify threats, evaluate current security controls, determine vulnerabilities, and prioritize risks
 - Demonstrate how to perform and document a risk analysis through “hands-on” exercises
 - Describe how to present a risk analysis report and manage risks through a remediation plan
 - Discuss some best practices and emerging concepts

The information presented and included in accompanying materials (if any) is of a general nature and is not intended to address the circumstances of any particular individual or entity. Although the speaker and content authors endeavor to provide accurate and timely information, there can be no guarantee that such information is accurate as of the date it is received or that it will continue to be accurate in the future. No one should act upon such information without appropriate professional advice after a thorough examination of the particular situation.
